

Environmental Management Plans

What is an EMP?

An EMP is a site or project specific plan that outlines the environmental management practices to be followed during the construction and operation of a project.

EMPs can be used to provide councils or the EPA adequate detail of the proposed works and the associated control measures. An EMP can also serve as an instruction manual for staff and contractors.

Typically, an EMP addresses the following issues, as applicable:

- Stockpile management
- Waste management
- Management of contamination
- Asbestos
- Wastewater
- Dust
- Chemical management
- Water conservation
- Erosion and sediment control
- Resource consumption
- Surface water quality
- Greenhouse gas emissions
- Energy
- Aboriginal heritage
- Air quality

Why choose FMG Engineering?

FMG Engineering understands the need for site-specific, concise, user-friendly EMPs that meet the needs of regulators. FMG Engineering has a highly experienced team that can tailor an EMP to suit your site and your needs, including:

- Soil Erosion and Drainage Management Plans (SEDMP)
- Construction Environmental Management Plans (CEMP)
- Stormwater Management Plans (SMP)
- Operation Environmental Management Plans (OEMP)
- Remediation Management Plans (RMP)
- Landscape Management Plans (LMP)
- Groundwater and soil monitoring and investigations.

FMG Engineering has:

- Over 40 years of local experience
- Certified environmental auditors
- A comprehensive understanding of planning and environmental legislation
- A well-established relationship with environmental regulatory authorities
- A practical and multi-disciplinary approach.
