

Environmental Management Systems

What is an EMS?

An Environmental Management System (EMS) is simply a quality management system that is focused on a set of procedures and policies to minimise your organisation's environmental impact.

Whether your company aims to become certified to ISO14001 or simply wants to comply with relevant legislation, we can tailor an EMS to suit your needs.

Why have an EMS?

- Enables the company to systematically and proactively manage its environmental impacts.
- Demonstrates that the organisation has identified its environmental risks and is managing these.
- Promotes a responsible positive corporate image.

Why choose FMG Engineering?

FMG has a team of highly experienced EMS experts, including a Certified Environmental Management Systems Principal Auditor with over 15 years of EMS experience who can develop an EMS that:

- is user-friendly
- is relevant to your organisation
- is aligned with your existing safety or quality systems, as applicable
- is aligned with the requirements of ISO14001
- supports your company's strategic direction
- engages the right people
- is robust.

We offer the following EMS services:

- EMS gap analysis
- Risk identification and assessment
- Preparation of environmental legal registers
- Internal auditing
- Training
- Preparation of environmental policies and procedures
- Aspects and impacts registers
- Preparation of environmental management plans
- Management reviews
- System overhauls
- EMS compliance audits
- General environmental management advice.
